## European Technical Assessment ETA-17/0629

Page 2 of 10 | 21 August 2017

English translation prepared by DIBt

The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

## **Specific Part**

## 1 Technical description of the product

The Betongskrue mekanisk galvanisert Op. 1 of sizes SK 8, SK 10 and SK 12 is and anchor made of galvanized steel. The anchor is screwed into a predrilled cylindrical drill hole. The special thread of the anchor cuts an internal thread into the member while setting. The anchorage is characterised by mechanical interlock in the special thread.

The product description is given in Annex A.

## 2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

## 3 Performance of the product and references to the methods used for its assessment

## 3.1 Mechanical resistance and stability (BWR 1)

Wesentliches Merkmal	Leistung
Characteristic resistance under static and quasi-static loading, displacements	See Annex C1 and C2

## 3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Anchorages satisfy requirements for Class A1
Resistance to fire	No performance assessed

## 4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with European Assessment Documents EAD No. 330232-00-0601 the applicable European legal act is: [96/582/EC].

The system to be applied is: 1

## **European Technical Assessment ETA-17/0629**

Page 4 of 10 | 21 August 2017

English translation prepared by DIBt

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable European Assessment Document

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited with Deutsches Institut für Bautechnik.

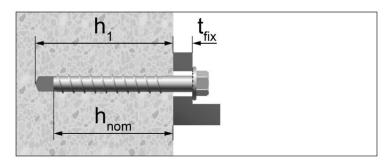

Issued in Berlin on 21 August 2017 by Deutsches Institut für Bautechnik

### Concrete screw after installation

## Marking of head

Reverse Locking Serrations

Head marking:

Identifying mark of producer: SK Nominal size: e.g. 12 mm Length L: e.g. 120 mm

## Table A1: Dimensions and materials

Anchor size			SK 8	SK 10	SK 12		
Length of anchor	min L	[mm]	70	80	100		
	max L	[mm]	150	150	150		
Thread diameter	D	[mm]	9,95	12,5	14,2		
Shaft diameter	d	[mm]	7,4	9,4	11,3		
Thread pitch	р	[mm]	5,8	7,8	8,1		
Material			Steel 10B21 acc. To SAE-J403				
Coating			zinc coating: electro plated (>5μm)				
			or mechanical plated (>30μm)				

Betongskrue mekanisk galvanisert Op. 1

Product description
Installed condition, dimensions and materials

Annex A 1

## **Specifications of Intended Use**

### Anchorages subject to:

· Static and quasi-static loads:

#### **Base materials:**

- Reinforced or unreinforced normal weight concrete according to EN 206-1:2000,
- Strength classes C20/25 to C50/60 according to EN 206-1:2000,
- Non-cracked or cracked concrete

## **Use conditions (Environmental conditions)**

Anchorages subject to dry internal conditions.

#### Design:

- Anchorages are designed under the responsibility of an engineer experienced in anchorages and concrete work.
- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the anchor is indicated on the design drawings (e. g. position of the anchor relative to reinforcement or to supports, etc.).
- Design of fastenings in accordance to FprEN 1992-4:2016 and EOTA Technical Report TR 055

#### **Installation:**

- Hammer drilling only: all sizes and all embedment depths.
- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.
- In case of aborted hole: new drilling at a minimum distance away of twice the depth of the aborted hole or smaller distance if the aborted hole is filled with high strength mortar and if under shear or oblique tension load it is not the direction of the load application.
- After installation further turning of the anchor must not be possible.
- The head of the anchor must be supported on the fixture and is not damaged.

## Installation instruction

Drill the hole to the depth  $h_1$ .

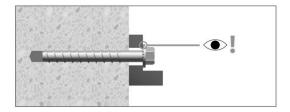

Clean the hole.

Screw in the anchor by using a torque wrench or an impact screw driver. In case of using torque wrench: T<sub>inst</sub> acc. to Table B1.

In case of using impact screw driver:  $T_{\text{max}}$  acc. to Table B1. WS= Wrench Size

Control of complete setting, full contact of screw head with fixture part.
